

# Internet Search Techniques

Finding What You Want on the Web Easily,  
Quickly, and (sort of) Effortlessly...

Presented by: Sharon Coward

# Overview

## Objectives:

- Understand the Web as a repository of information.
- Explore different search tools.
- Learn to use the tools appropriately
- Evaluate search results.

# Internet Search Technologies

- Internet = network of computers
- The Web = one of the services available via the Internet; interconnected documents & other resources, linked by hyperlinks and URLs

# The Web – how big is it?

- Google: 5 million terabytes = 5 trillion megabytes of data.
- Google indexes only 200 terabytes i.e. 0.004%
- 2005 – 11.5 billion pages indexable web; doubles in size every 5 yrs.

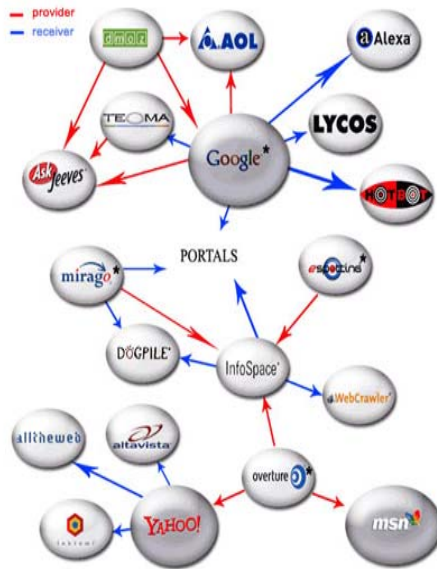

# Search Tools

- Search Engines
- Meta-search Engines
- Information Gateways
- Invisible/Deep Web

# What is a “Search Engine”?

- 1. A (computer) program that searches documents for specified keywords and returns a list of the documents where the *keywords* were found.
- Often used to specifically describe systems like Google and Bing that enable users to search for documents on the World Wide Web

<http://www.webopedia.com>

--

# Search Engines

- Number of pages searched can vary
- Good results depend on using proper search syntax not just the scope of the engine's coverage
- **Good For:**

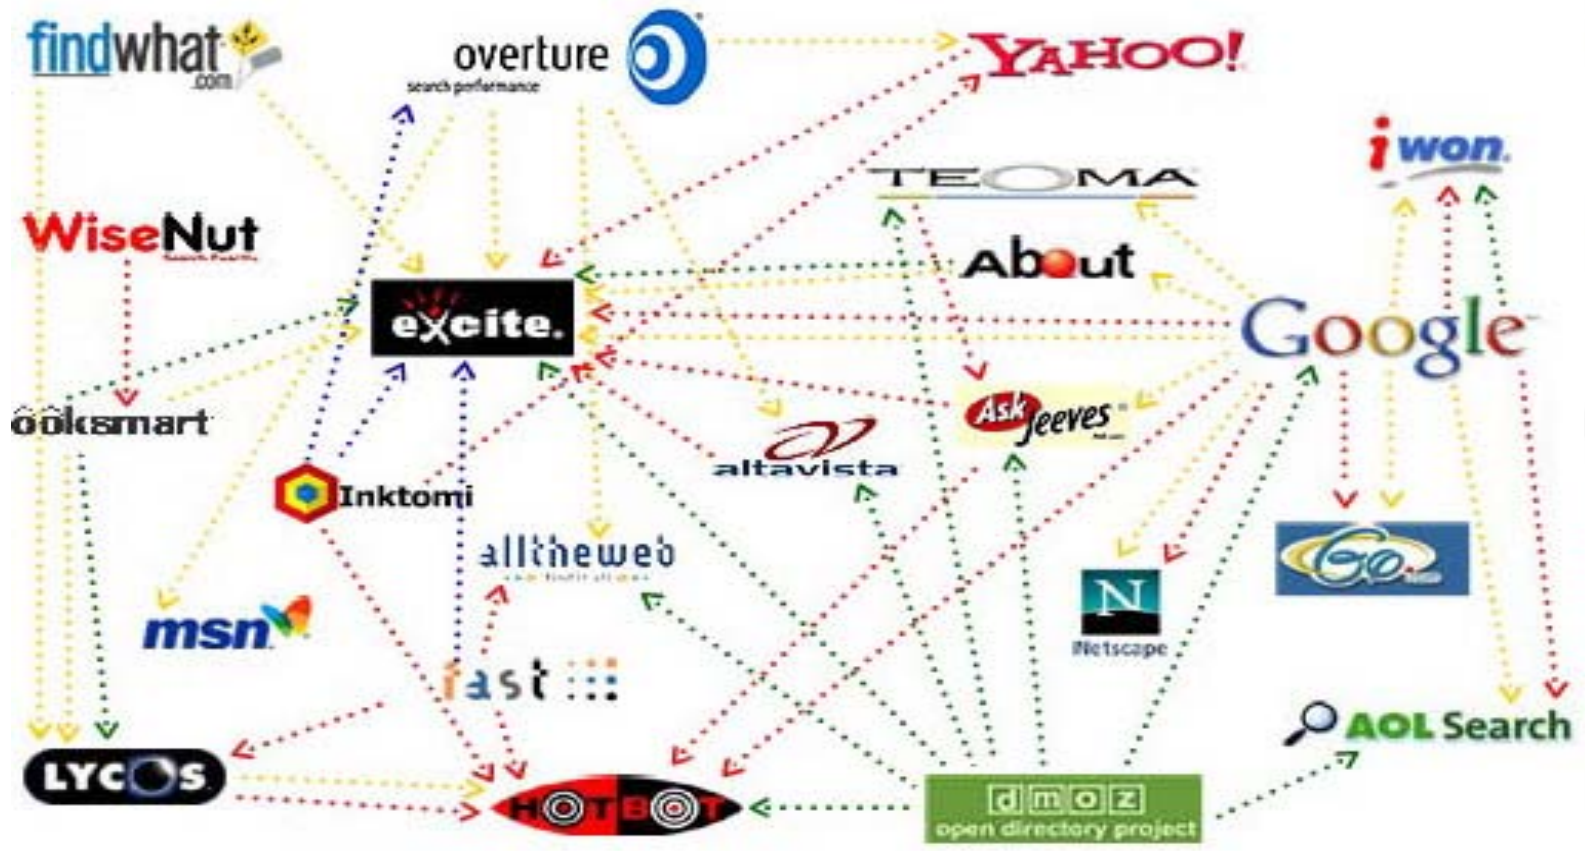

well defined topics to search; looking for specific sites; want a large number of websites returned for topic; retrieve particular types of documents, eg. Pdf

**Not Good For:** Browsing through a subject area.

# Search Engines

# Search Engine Relationship

Search Engine	Web Search Results	Sponsored Listings	Directory Listings
			N/A
			N/A
			N/A
			N/A
			N/A
		N/A	
			N/A
			
			N/A
			N/A
			N/A
			N/A
			

# Meta Search Engines

- Skim-search several search engines at once
- Usually reach about 10% of results of each engine they visit
- Cannot perform advanced-style searches which use engine-specific syntax
- **Good For:**  
quick search engine results overview, doing simple searches with 1 or 2 keywords; want a small # relevant results; problems finding what you want; convenient to search different content sources from one page
- **Not Good For:** comprehensive results from a complex search

# Meta-Search Engines

metacrawler®

# Meta Search Engines

copernic

Web Images Audio Video News

- Copernic - <http://find.copernic.com>

# Information Gateways

- Subject directories, virtual libraries
- Compiled by people, not robots
- Subject categories
- More focus on sifting for relevance and quality

Good For: you have a clear topic but not unique keywords; browse for ideas

Not Good For: Quickly finding information from widely varying themes

- Open Learn  
<http://openlearn.open.ac.uk/> (open university course materials)
- Open Directory Project  
<http://www.dmoz.org> (largest human edited directory)

# Invisible/Deep Web

- 91,000 terabytes vs 167 terabytes in surface Web
- Search engines can't access content – databases, non-text files; password protected areas; dynamic content

# Invisible/Deep Web

- Dynamic content: - returned in response to a submitted query or accessed only through a form,
- Unlinked content: pages which are not linked to by other pages
- Private Web: sites that require registration and login (password-protected resources).
- Searchable - Entry pages can be found using other search tools; include term 'database' in search

Good For: Gathering specific kinds of data

Not Good For: Browsing through a subject area

# Deep Web Expanding

- Blog postings
- Comments
- Discussions and other communicative activities on social networking sites
- Bookmarks and citations stored on social bookmarking sites

# Invisible/Deep Web

- [www.science.gov](http://www.science.gov) - over 40 databases, 1,950 selected websites, 200 million pages
- <http://www.deepwebtech.com/>
- <http://infomine.ucr.edu/>
- <http://www.completeplanet.com/> - 70,000+ databases
- <http://www.stumbleupon.com/> - compiled by humans since 2002

# Search Strategies

1. Identify your concepts
2. Make a list of search terms/ keywords for each concept e.g.
  - global warming/ greenhouse effect
  - greenhouse gases/ climate change
3. Specify the logical relationships among your search terms
4. Be specific – golden retriever vs dog

# Search Strategies

[Advanced Search Tip](#)

rain snow

Find web pages that have...

all these words:

this exact wording or phrase:

one or more of these words:

OR

OR

# Boolean Operators

**AND** Articles will contain mineral and deposit

**OR** Articles will contain either mineral or ore

**NOT** Articles will contain mineral deposit but not mining

# Advanced Techniques

- Use quotation marks “...” to specify exact phrases:  
“internet marketing”
- Use the plus (+) and minus (-) sign to include and exclude words:  
“internet marketing +facebook” vs “internet marketing –facebook”

# Advanced Search

- Wildcard (\*). Searching for *'looking for \**' will return results that have the words **'looking for dogs'**, 'looking for cats' etc.
- Stop words ignored -“a, an,the, and”. Use a + or – symbol to force the engine to include those words in your search.

# Advanced Search

- ~ **Similar Words**

Search for similar words, or synonyms. Searching *search ~tips* will return results with 'help', 'guide', 'tutorial' etc.

# Advanced Search

- Web page title  
*allintitle:jamaica*
- Website or domain  
*site:barbados.org "beach hotel"*

# Advanced Search

(e.g. youtube.com, .edu)

[\[-\] Date, usage rights, numeric range, and more](#)

Date: (how recent the page is)

anytime

[Usage rights:](#)

not filtered by license

Where your keywords show up:

anywhere in the page

Region:

any region

Numeric range:

(e.g. \$1500..\$3000)

[SafeSearch:](#)

Off  On

# Advanced Search

- File type

filetype:ppt site:edu "global warming"

- Definitions

define:pixel

define:"due diligence"

# Advanced Search

- **Truncation:** Searches on the root of the word adding different word endings or plurals.

*Educat\** searches *educator, education, educational, educated.*

*Colo\*r* would find documents that contain color and colour.

# Examine Results

**Authority:** Who owns the site? Credentials?

.gov, .edu, .mil, .org usually more reliable than  
.com

**Currency:** How up-to-date is the information?

Check to see if you can tell when the last time  
the site was updated.
